

HENNEPIN CANAL

FISHERIES STATUS SUMMARY

LOCATION – The Hennepin Canal is a 104.5 mile linear park that spans (Rock Island, Henry, Bureau, Lee, and Whiteside Counties). Construction began on the Canal in 1890 and was completed in 1907. The Canal became a State Park in 1970.

DESCRIPTION – The Hennepin Canal spans 5 counties. The Visitors Center is located just south of Interstate 80 just off Highway 40. The Canal is 925 acres with an average depth of 5 feet; the canal is 104.5 miles long and averages about 90 feet wide. The majority of the Canal is accessible to bank angling. Boating is permitted with a maximum 10 horsepower limit. All boats should try to operate with “no wake” to protect the shoreline from wave erosion. The Hennepin Canal has 10 concrete boat ramps and 1 gravel boat ramp. There is no concession on the canal. However, there are many cities near the Canal that offer bait, food and supplies.

MANAGEMENT ACTIVITIES - The fishery is managed by annual species-specific surveys and stocking. The Hennepin Canal receives an annual stocking of Largemouth bass and Sauger. Trout are stocked at the Visitor Center Lagoon in the spring and fall.

Largemouth Bass:

The feeder canal has a history of low Largemouth abundance until you get to the lower end near the summit pool. The longer middle pools of the Hennepin canal provide the best habitat and forage bass.

Bluegill:

Bluegills are abundant throughout the entire canal system. The middle, longer, pools typically have the best populations but in the recent years the east end of the canal near Tiskilwa has a strong Bluegill population.
